

Does your child have confirmed or suspected Dyspraxia or DCD?

Researchers at the University of Exeter have created a **free training resource** to assist parents, teachers, sports coaches and therapists improve the interceptive motor skills of children with movement coordination difficulties.

Our website features a series of free videos which aim to teach improved coordination in a variety of sporting skills.

We would like you to make use of these videos and let us know if they are useful and how they can be improved.

Visit see2learn.co.uk to find out more!
